

BKT AL200

Electronic swinghandle

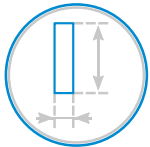

The AL200 is an electronic swinghandle for ICT cabinets. It allows cabinet doors opening in a standard mechanical way and by remote electrical control. It can operate with any access control system. When connected to any reader with Wiegand interface, the swinghandle operates as a standalone access control system. Thanks to the installed cylinder, emergency opening with a key is also possible. For use in cabinets installed indoors

Two connectors providing control and status signals and inputs for the optional card reader. Power supply 10-24V DC.

Handle position sensor. LED signalling.

Installation in a standard 150x25mm cut-out. Can be installed in a single or multipoint locking system.

Emergency key opening. Master key inserts available.

Compliant with the EMC Directive 2014/30/EU.

One handle, three applications.

1. Mechanical handle.

Use temporarily as a mechanical key-operated handle if you intend to install access control in the near future.

2. Standalone access control system.

Required any reader with Wiegand interface or dedicated AR221 reader.

3. Electronic lock.

For use in any larger access control system.
